

MOBILIS

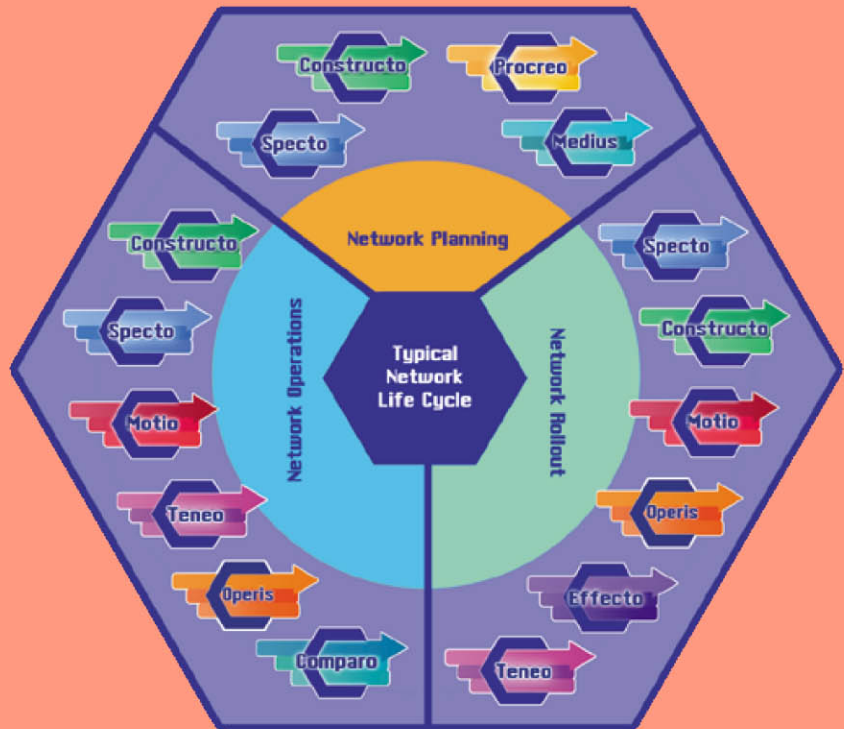

Complete Network Infrastructure Management Solution

Fast, effective, user-friendly

Saves times, reduces costs

Accurate forecasting and tracking

End-to-End Network Deployment Solutions

Streamlined Network Rollout and Operation

Mobilis puts you in control, delivering efficiency and cost benefits needed in today's competitive telecommunications environment. We evolve continuously to ensure that our customers are able to harness the latest technologies available to improve their mobile network performance.

Mobilis is a seamless software solution for telecommunication network rollout and operation. It provides a complete modular family of software products that can be implemented individually or in any combination to address your specific business requirements.

The Mobilis product family works by streamlining the complex process of planning, implementing, operating and optimizing your network. These products can be deployed in a client/server or a 3-tier web environment and have been developed using Oracle technology.

The use of Oracle technology means that Consistel's customers are assured of a rapidly accessible, robust, scalable and user-friendly set of software products.

MOBILIS

Mobilis Product Family

The individual software applications that form Mobilis are:

Mobilis Constructo allows tasks or activities to be tracked and monitored during the rollout of a new network or the expansion of an existing network.

Mobilis Procreo is a transmission planning and equipment provisioning application that is used to store information about connections within the network in a three-layer hierarchy; link, bearer and circuit.

Mobilis Operis is the complete solution for efficient and effective network operation. It is not only ideal for new networks but also for more established networks that are in a phase of upgrade, expansion or maintenance.

Mobilis Motio addresses the problems associated with tracking assets and managing network inventory, either in a new or mature network.

Mobilis Teneo is an Estates Management application. It helps an Operator to reduce the costs associated with planning applications, legal documentation, utilities and other site management expenditure.

Mobilis Specto enables its users to visually display the topology of the network against a geographical map. It provides a schematic view of the network.

Mobilis Effecto provides a seamless reporting interface that presents its users with a single point of access to all information captured in their database application.

Mobilis Medius simplifies the process of importing data from other software tools and exporting data from Mobilis. Medius acts as a translator to and from the Mobilis software family.

Mobilis Comparo provides a central repository for storing, changing, and setting network parameters. Comparo establishes the visibility and control of configuration required to help to run the network more efficiently.
